Automated Testing for Oracle

Protect your technology investment with testing services prior to an Oracle update

Quarterly updates for Oracle Cloud Applications deliver exciting new features and functionality for your business. But ensuring these updates add value without causing unexpected issues can be challenging. That's where automated testing steps in. Using Argano XpressTest powered by Opkey, our expert Oracle consultants can help you create a test plan unique to your business to make sure your critical processes continue to run smoothly after the update.

We start by reviewing filtered and enriched new features and release notes with you to identify potential impacts and opportunities. Then we execute automated test suites – or manual if needed. Following testing, we assess the results and recommend any necessary mitigations. Working with you every step of the way, we ensure that the updates deliver the expected value, and your mission-critical systems and processes remain reliable and efficient.

Benefits:

- Automate and accelerate testing
- Monitor testing progress in real-time
- Increase consistency across test cycles
- Review enriched Oracle release notes
- Mitigate potential issues and minimize disruption
- Maximize your technology investment

Trusted Expertise:

- Industry experience and best practices
- 25+ years of Oracle partnership

Results

Tests are repeatable and completed with limited or no intervention

Results are comparable to prior test cycles

Outputs provide detailed, consistent documentation with screen captures and date/time stamps

Scalable

Varying conditions are tested by updating the data repository, including "negative tests"

Test "mining" or a library of test scripts can be leveraged to create unique test scripts

Scripts can be sequenced to represent business processes

Testing can be more comprehensive, broader, and deeper

Cost effective

Execution can be scheduled anytime after the update (night/weekend)

Proactive communications or mitigations related to findings

Reduction in resource time for testing activities

Fixed price allowing a predictable cost every period

2024 Oracle Partner Awards Winner
