Security Assessment for Microsoft Dynamics

Review your security management and identify potential risks

Do you need help with an issue or an overall review of your security management? Schedule a one-hour advisory session with one of our security consultants to review your security settings and assess potential risks.

Expert security advice and best practices

We are offering a one-on-one, professional consultation at no charge with our leading Microsoft Dynamics security experts. If you are looking to review your security management settings, get advice, or learn best practices based on real-live scenarios, this session is for you. This consultation is suited for system administrators and end-users touching on the following areas within Microsoft Dynamics 365 and Microsoft Dynamics AX:

User role assignments

Understand role structure and how users are assigned to those roles. Determine the right access level for your users and roles.

Role configuration

If you have designed custom roles or built roles based on business processes, we will review them along with your license consumption to help you determine the right role structure for your business.

License consumption

We will review your level of license consumption and how they are assigned, making recommendations on how to optimize them so you get the most out of your investment.

Best practices

Identifying your security model can help uncover issues that could potentially lead to errors or improper access. We advise you on best practice recommendations and next action items you should consider for a mature security model.

Risk Assessment

Understand how your security model is built to better manage risk. Whether it is within your security settings or the implementation itself, we can assess potential risk factors and propose solutions to minimize them.

Benefits:

- Receive expert advice in assessing your security management
- Understand user role configurations and assignments
- Optimize license consumption
- Identify potentials risks factors
- Leverage best practices and recommendations
