

SAP Business Network for Logistics

Accelerate logistics efficiency with a connected, global network

Managing complex, global logistics is more than just tracking shipments – it requires real-time visibility, seamless collaboration, and predictive insights to stay agile. SAP Business Network for Logistics (BN4L) connects shippers, carriers, and logistics providers in a cloud-based platform that simplifies freight tendering, subcontracting, tracking, and dock appointment scheduling. BN4L's Freight Collaboration and Global Track & Trace (GTT) helps customers extract even more value from SAP Extended Warehouse Management (EWM) and Transportation Management (TM) by further optimizing logistics operations, reducing costs, and responding quickly to disruptions. Argano helps businesses unlock the full potential of BN4L by delivering tailored solutions that drive greater efficiency, visibility, and collaboration throughout the supply chain, empowering you to meet today's challenges and stay ahead of the competition.

Capabilities

Freight Collaboration

Streamlined communication between shippers and carriers, optimizing freight procurement and execution.

Automated Settlement

Simplified financial reconciliation between shippers and carriers, improving billing accuracy and reducing administrative costs.

Predictive Insights

Leverage advanced analytics to gain actionable insights and proactively manage risks, improving supply chain resilience.

Material Traceability

Track the origin and movement of raw materials and components, supports compliance and sustainability initiatives like carbon footprint tracking, and can use blockchain for secure and transparent traceability.

Shipment Visibility

Track shipments in real time to manage disruptions and ensure efficient delivery across the supply chain.

Global Connectivity

Integration with a vast network of logistics partners, enabling collaboration and scalability across international supply chains.

Cloud-Based SaaS Platform

Scalable and flexible solution that can be accessed from any browser, reducing infrastructure costs and enabling agility.

Benefits:

- Streamline logistics with real-time collaboration and automation
- Lower costs with standardized digital communication
- Gain real-time shipment visibility and supply chain insights
- Collaborate seamlessly with connections with global logistics partners
- Manage risk proactively with predictive, exception-based alerts
- Respond faster to disruptions and improve supply chain agility
