

Databricks + SAP

Unlock the full value of your SAP data
with Databricks

SAP systems contain valuable enterprise data, but legacy infrastructure, data silos, and integration challenges often hinder its use for analytics and AI. Databricks solves this by connecting SAP data to its Data Intelligence Platform-enabling a modern, unified, and AI-ready data foundation.

With deep expertise in both SAP and Databricks, argano ensures secure, scalable integration to accelerate initiatives like lakehouse architecture, predictive analytics, and GenAI at scale.

SAP-to-Databricks Integration Strategy

We design a clear, strategic roadmap to extract, load, and transform SAP data – including ECC, S/4HANA, and SAP BW – into Databricks. Our approach aligns with your current architecture and business objectives to ensure high ROI and minimal disruption.

AI & ML Model Enablement

We enable your teams to operationalize SAP data in Databricks for AI use cases like demand forecasting, predictive maintenance, and intelligent support-leveraging Mbfex, Mosaic AI, and Model Serving.

Custom Pipeline Development & Automation

Argano builds automated ELT/ETL pipelines using Databricks connectors for SAP modules like FI/CO, SD, MM, and PP-ensuring reliable performance, scalability, and support for real-time and batch processing.

Governance, Security & Performance Optimization

From Unity Catalog to role-based access and audit trails, Argano, enforces strong data governance while continuously optimizing pipeline performance and Databricks workloads for enterprise-scale reliability.

Benefits:

- **Unified Architecture:** Connect SAP data to Databricks' lakehouse for streamlined analytics and AI
- **Faster Insights:** Quickly turn SAP data into decisions with Databricks' high-performance engine
- **AI-Ready Data:** Apply advanced ML tools to unlock predictive insights from SAP
- **Effortless Scale:** Handle increasing SAP data volumes with Databricks' scalable platform
