Greater Efficiencies, Reduced Spend with a Move to the Cloud

An energy contractor wanted to streamline its supply chain and finance processes and modernize them for the future. Oracle Cloud Applications provided just the answer–and offered significant cost benefits along the way.

How the cloud reduces spend

The company was retiring its JDE system and shifting entirely to the cloud for its supply chain and ERP solutions. The move provides multiple benefits, including significant savings in direct spend over five years.

$62M+
in cost benefit

The cost-benefit breakdown

$52M+

Reduced direct material spend

Increased visibility into project material expenses, including how much is spent and with whom, enables efficiencies in procurement and economies of scale.

$6.8M

Reduced direct services spend

Increased visibility into spend on services and the efficiency of subcontractors makes for smarter decisions about who the company hires.

$1.8M

Reduced maverick spend

Better forecasting and more connected data eliminate the frequency of unexpected or rogue spending on individual projects.

$1.2M

Reduced “other” costs

Holistic views across projects and improved data analysis decrease “other” expenses that can blow project budgets.

$0.5M

Reduced expedited expenses

Improved data by project and across the organization minimizes the need for rush services to address emergent needs.

What can the cloud do for you?

The cloud provides cost benefits in obvious and less-than-obvious ways. Connect with Argano to learn how a cloud migration can improve your business processes and reduce your spending.
