

# Project Controls 2024

## Argano created a new model to support project controls

Project teams are oftentimes forced to make project-defining decisions based upon dated or inaccurate data. Argano enables teams to make informed decisions based on data-driven cost, scheduled, and metrics.

Through thorough financial, schedule, and productivity analysis, Argano ensures every actual is correct and understands the “why” behind the data and how they all correlate together to build the big picture.

## Construction Financial Analytics

Argano’s financial tools and processes are built specifically for the construction industry. Our Construction Financial Analysts and Invoice Reconcilers provide business intelligence that allows your team to be confident in project cost management.

Argano provides transparency and clarity to your project finances. Our services include budget creation, WBS strategy, financial accruals, forecasting, earned value, variance analysis, and change management.

## Project Estimating

Argano builds intelligence out of your historical data and works with stakeholders to deliver estimates that accurately capture your project scope.

## Process Scheduling

Argano’s scheduling support turns program and project schedules into true management tools to plan work and foresee potential issues. We take the initiative to ensure schedules are current with real-time, accurate data.

Our Primavera P6 schedules show the path to project success and serve as the benchmark to measure against as deviations occur. We maintain open contact with the project team to stay current with overall project performance, scope changes, and schedule impacts.

## Metrics & Productivity Analytics

We have the expertise to refine your data, unearth critical insights, and establish the milestones and KPIs that help you more easily measure success. At Argano, our technical analysts are experts at managing data and building reports - but what sets us apart is a focus on outcomes. We understand your business and identify the information that drives successful decisions.
