

# Argano and Microsoft: Solutions for Life Science

Improving operations, optimizing compliance, changing lives

You focus on building your life science business – the innovative medical devices, personalized treatments, genetic therapies, and products and services changing patient care and the world – and leave operational efficiency, compliance, and supply chain optimization to the experts at Argano.

Our team will meet you where you are on your path to commercialization, help ensure adherence to complex regulations and standards, automate operations workflows, and ensure the data you need to drive your business further is always immediately available and completely actionable.

## Easing validation

Trust a partner with deep experience in ensuring adherence to FDA validation and 21 CFR Part 11 and other requirements. Argano includes validation in every methodology: from installation of your solution to its operation and performance – and from product development to distribution – we'll keep you aligned with FDA Good Practices, and let your team stay focused on driving business rather than just stay busy with validation tasks.

## Optimizing commercialization

It's a massive lift to move a life science innovation from conception to commercialization. With Argano, you'll benefit from the expertise of consultants with extensive backgrounds in the industry itself who can recommend solutions and services that help you get to market faster, and empower you with a more complete and actionable view of your competitive landscape, your regulatory roadmap, and your customer lifecycle.

## Benefits:

- Simplify compliance and validation tasks
- Optimize your paths to commercialization
- Streamline operations and supply chain management

## Automating compliance

Compliance is complicated and regulations change often. As a result, innovation often suffers. But with Argano, we create solutions that optimize operational workflows while concurrently automating compliance tasks and improving transparency. Solutions such as the Argano Audit and Security Manager, which supports Sarbanes-Oxley (SOX) 404 compliance around segregation of duties as well as financial SOX compliance. We also have the tools and templates to support FDA compliance.

## Improving the life science supply chain

The life science industry often requires supply chain and inventory data at the most granular levels: from container to pallet to package. Leveraging Dynamics 365 SCM, and tools such as RFID and near field communication (NFC) to locate, and report on, items by barcode, serial number, lot number, and more, we enable clients to ensure optimal inventory across all locations and vendors.
