

Argano Smart Supply Chain Agents

AI-enabled intelligence for real-time supply chain optimization

Modern supply chains face constant volatility - from fluctuating demand and supplier disruptions to margin pressure and inventory imbalance - while traditional dashboards and manual planning can't keep pace. Argano Smart Supply Chain Agents continuously monitor, reason, and act across end-to-end supply chain functions, leveraging specialized, domain-specific AI. The result: proactive insights, faster decisions, and improved operational efficiency.

From reactive to proactive execution

To remain competitive, organizations need real-time visibility, predictive intelligence, and automated actions that moves beyond alerts to closed-loop execution. Yet most still operated with fragmented systems, manual planning cycles, and reactive workflows that drive up inventory costs and slow response times.

AI agents bridge this gap, transforming supply chain operations from reactive to proactive and, ultimately, autonomous execution.

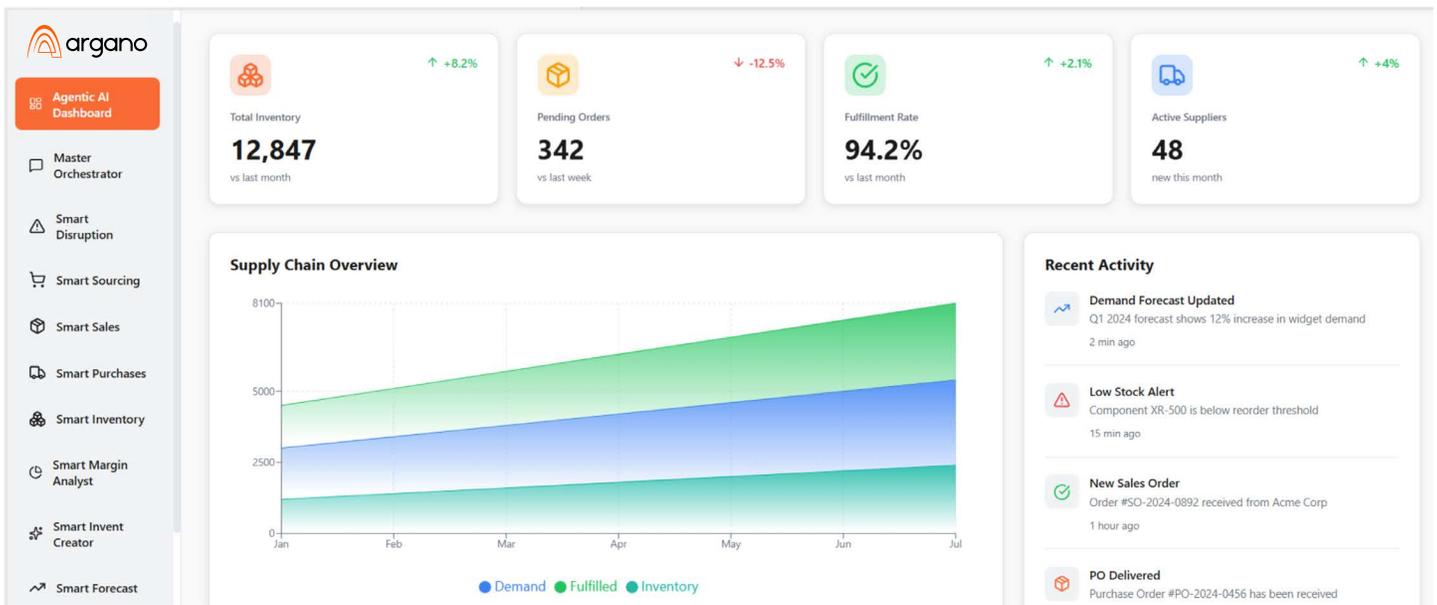

Centralized AI driving deeper insights

The Smart Supply Chain Agent Hub is a centralized dashboard for managing all AI agents and monitoring operational intelligence. It includes the following agents:

Agent	Description
Master Orchestrator	Coordinates and governs all agents for seamless operation
Smart Disruption	Detects tariff changes and alerts Procurement/Finance teams
Smart Sourcing	Optimizes supplier selection and sourcing strategies
Smart Sales	Provides visibility into sales orders and fulfillment status
Smart Purchase	Highlights purchasing progress and PO status
Smart Inventory	Monitors inventory levels and recommends restocking
Smart Margin Analyst	Analyzes margin performance and identifies cost-saving opportunities
Smart Forecast	Generates demand forecasts to support planning decisions

Benefits

- **Real-time visibility** into supply chain operations
- **AI-driven recommendations** for smarter, faster decisions
- **Improved forecast accuracy** and inventory optimization
- **Lower operational costs** and reduced working capital
- **Enhanced agility** through proactive sensing and response

Built on trusted Microsoft technology

Designed for Microsoft Dynamics 365 Supply Chain Management and built using Microsoft Copilot Studio, Argano Smart Supply Chain Agents leverage the full breadth of the Microsoft intelligent ecosystem:

- Dynamics 365 Supply Chain Management
- Microsoft Copilot Studio
- Power Platform (Power Automate, Power Apps)
- Azure AI
- Microsoft Fabric

Start your supply chain transformation

Argano offers flexible implementation, tailored to your business needs and delivered through collaborative workshops, design sessions, and focused implementation sprints.

Get started today! Schedule an AI Executive Briefing, including a live demo of our intelligent agents, to see how they can transform your supply chain operations.
