

SAP IBP on Public Cloud Accelerator

Deliver early planning value alongside your S/4HANA go-live

SAP Integrated Business Planning (IBP) provides advanced capabilities for forecasting, supply-demand balancing, and scenario modeling, helping companies align planning decisions with real-world constraints. For SAP Cloud ERP clients adopting Public Cloud, adding IBP from the start ensures planning isn't an afterthought, but a core pillar of the digital transformation.

Argano's IBP on Public Cloud Accelerator offers a fast, focused path to activate IBP Demand or IBP Sales & Operations Planning (S&OP) in parallel with your S/HANA Cloud deployment. With more than two decades of supply chain planning experience, we help you lay a foundation for better forecasting, fewer customizations, and quicker time to value.

Scope

Choose from a targeted IBP module to complement your S/HANA Cloud implementation. Both options are designed to supplement S/HANA Cloud's native Materials Requirement Planning (MRP) and deliver enhanced planning capabilities without complexity.

- IBP for Demand - Advanced statistical forecasting, product segmentation, lifecycle planning, and forecast error analysis
- IBP for S&OP - Time-series demand planning, consensus planning, supply-demand balancing, and constraint visibility

Key Enhancements

Integrated tools for seamless deployment and enhanced planning

- SAP Cloud Integration content for standard planning interfaces
- Forecast Value-Add Analytics to evaluate and optimize forecast performance

Timeline

Our IBP on Public Cloud Accelerator is designed to go live in just 12 weeks, running in parallel with your S/HANA Cloud deployment for a synchronized and efficient launch. The rapid timeline ensures early ROI and minimizes disruption to ongoing operations.

Benefits

- Embed planning into your ERP transformation from day one
- Accelerate time-to-value with prepackaged IBP Demand or S&OP modules
- Improve forecast accuracy using statistical modeling and product segmentation
- Align supply and demand with scenario planning and constraint visibility
- Reduce customization needs by leveraging standard IBP and S/4HANA capabilities
- Increase data readiness with upfront planning data requirements
