

# Identify Your Mobile Strategy for UKG

Employees rely on mobile technologies more than ever for work and personal activities. Providing them with a high-functioning mobile experience makes it easier to get their work done while allowing your company to build stronger connections, drive engagement, and maintain loyalty.

## Key considerations

- **Policy:** What is your Bring Your Own Device (BYOD) policy?
- **Performance:** What are the limitations of the application and the infrastructure?
- **Workload:** What are the requirements to implement and maintain the system?
- **Usability:** How will you balance ease of use with ensuring security?
- **Adoption:** How will you get buy-in from stakeholders and users? What educational options will you offer? How will you address employees not wanting to use their personal devices for work-related functions?

## Expertise for your organization

Argano brings deep expertise in UKG, combined with extensive industry experience, technical knowledge, and mobile strategy capabilities, to help organizations design and deliver solutions aligned to their unique needs. Through a thoughtful, collaborative approach, Argano delivers efficient, scalable, and maintainable outcomes that drive long-term success.

To ensure mobile success, consider these important questions:

1. What is the business need?
2. What benefits are you providing to your end users?
3. Are you meeting a key business need?
