Four Core Pillars

A structured platform - not a single product - built around four pillars that hold up the enterprise.

Enterprise Business Functions and Processes

Finance Spend Supply Chain Human Capital Customer Engagement

THE AUTONOMOUS ENTERPRISE SAP Platform

Joule

One intelligent interface
for every system

Autonomous Suite

One unified system across
five domains

Industry AI

Process knowledge &
compliance for your
value chain

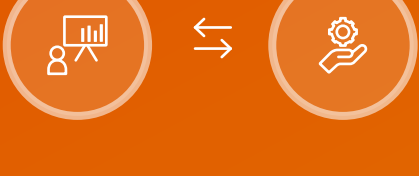

**Business AI
Platform**

Unified context, aligned
data, governance

Two Kinds of AI

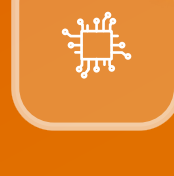

Two capabilities work together - grounded in SAP's process expertise, identity & governance.

ASSISTANTS

The Teammates

Role-aware, surfaced through Joule - they work
alongside teams in the flow of work.

AGENTS

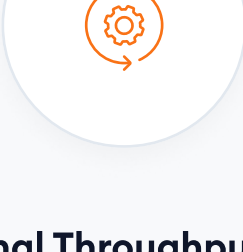

The Doers

Execute multi-step tasks autonomously - grounded in
process, identity & governance.

Both operate within the same governance, identity & compliance framework

Where Returns Concentrate

The strongest returns concentrate in four categories - based on what Argano sees in real implementations.

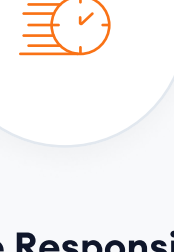

Operational Throughput at Scale

Agents handle routine transactions end to end - this value
concentrates in high-volume, well-defined workflows.

High Volume

Well-Defined

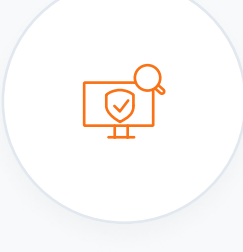

Real-Time Responsiveness

When conditions change, the business acts as one - no delay
between signal and action.

Real-Time

Coordinated

Governed Speed

Speed and control are not a tradeoff - every action logged
and auditable.

Speed

Control

Leverage Existing SAP

Build on your foundation - agents inherit business logic, data
debt gets amplified.

Inherits Logic

Debt Amplified

A Disciplined Sequence

Neither immediate transformation nor indefinite delay - an evidence-driven path.

Assess & Prioritize

Structured assessment of data quality,
process maturity & governance. Identify 2-3
high-volume workflows for measurable
impact.

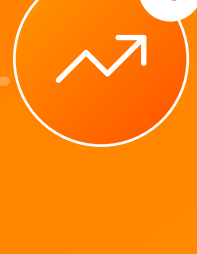

Build Governance First

Define what agents are authorized to do
before anything goes live - authorizations,
escalation & oversight.

Deliver a Contained Pilot

One use case, defined success criteria,
rigorous measurement. Prove business
value, not just that the tech works.

Scale Based on Evidence

Expand to additional domains based on
demonstrated results - not platform
enthusiasm. Let evidence drive the pace.

The Roadmap

Why early movers build an advantage late movers will find hard to replicate.

NEAR-TERM · 6-18 MONTHS

Documented Value

Early adopters show documented value
from contained workflows.

MEDIUM-TERM · 18 MO - 3 YEARS

Standard Practice

Agent-first workflows become standard.
The productivity gap becomes visible.

LONG-TERM · 3+ YEARS

Agent-Run Operations

Agent-run ops become the primary model.
Talent shifts to judgment & strategy.

How Argano Reduces Risk

Not here to sell the platform – here to help you determine if you're positioned to act, and what success looks like.

Readiness Assessments

Prioritized roadmap against data,
process & governance

Use Case Validation

Which workflows justify agents
- and the business case

Tailored Agentic Solutions

Custom agents on Joule Studio
- proprietary logic

Governance Design

Authorizations, escalation
& oversight before go-live

Managed Services

Monitoring & optimization as
your footprint grows

Pilot Delivery

Contained proof-of-value with
defined success criteria

Don't invest on enthusiasm. **Identify the workflows.**
Build the foundation. Run a disciplined pilot.
