

Managed Services for Microsoft Business Applications

Operate, optimize, and continuously evolve your Microsoft environment

Unified managed services for continuous innovation

Argano delivers unified, managed services designed to drive continuous business impact from your Microsoft investments. Across Dynamics 365, Power Platform, and Azure, we bring together operations, optimization, and AI-powered innovation into a single, integrated approach—helping organizations continuously improve performance, unlock new value, and evolve with confidence.

We operate and optimize your Microsoft environment while simultaneously accelerating value through AI, automation, and data-driven insights.

Continuous performance with flexibility built in

Our model is built around continuous performance. We ensure your Microsoft environment is always improving, not just maintaining the status quo. We align to your priorities and adapt as your business evolves, giving you the flexibility to scale, reprioritize, and continuously drive value from your platform over time.

Unified management across your Microsoft environment

Argano manages your Microsoft environment as a unified system across Dynamics 365 and Power Platform, spanning data, AI, and Azure infrastructure. By integrating operations across the full stack, we ensure stability, performance, and governance, while creating a foundation that supports ongoing innovation without added complexity.

A single accountable partner aligned to outcomes

We act as your single accountable partner, managing the performance, health, and evolution of your environment. With deep domain experience across multiple industries, we align directly to your business goals ensuring your Microsoft platform continues to perform and adapt.

Optimization and AI innovation

We bring operations and innovation together into one continuous model. Argano monitors, optimizes, and enhances your environment while introducing automation, Copilot, and AI-driven capabilities that improve how work gets done. By connecting data, performance signals, and intelligent automation, your Microsoft platform becomes a continuously evolving system that drives productivity, efficiency, and sustained business performance.

A continuous model that connects operations, data, and AI to drive ongoing business performance
