

Configuration Manager

Efficiently setup, analyze, and manage
Dynamics 365 environments

Properly configuring environments is a significant and critical component of any Microsoft Dynamics 365 Finance and Supply Chain Management (SCM) implementation.

Customers implementing Dynamics 365 Finance and SCM can leverage Argano's Configuration Manager to improve and accelerate project delivery by reducing the time needed to setup and configure environments and legal entities.

Compare configurations across environments

- Compare parameters between environments
- Highlight differences between environments and roles.

Analyze legal entity setups

- Compare configurations cross company within the same environment
- View all setup tables within a centralized form

Quickly generate new number sequences

- Leverage style and formatted number sequence templates

Efficiently provision new users

- Copy security roles to users upon import from Azure
- Automatically create worker and position records upon import from Azure

Detailed insight into table usage

- Identify which tables are running heavy and affecting performance
- View detailed data entity information

Benefits:

- Reduce setup and configuration times for new legal entities
- Reduce time spent on user provisioning and management processes
- Assist data migration and management activities with detailed, contextual information

Deliverables:

- Release notes
- Known and discovered issue reporting
- Product documentation
- Setup of the solution
- Training
