Tableau Server Health Check

Driving greater efficiencies across your IT operations

The Tableau Server Health Check is a comprehensive analysis aimed at optimizing the performance of your Tableau environment. Through meticulous examination, it assesses both your server infrastructure and end-user experience to identify areas for improvement. By analyzing your platform's current performance, the health check generates a detailed roadmap with recommendations and best practices.

The Tableau Server Health Check not only resolves technical challenges but also fosters deeper engagement and understanding of Tableau solutions.

Alleviating frustrations associated with slow performance and providing tailored recommendations, our assessment promotes greater user adoption and streamlines your data insights.

Our Approach

Assess & Analyze

Evaluate your Tableau Server environment – from infrastructure and performance to end-user experience – to pinpoint bottlenecks and areas for improvement.

Design & Recommend

Develop a tailored roadmap of actionable recommendations and best practices to optimize performance and drive greater user adoption.

Implement & Accelerate

Partner with Argano to resolve technical challenges, streamline your analytics, and enable faster, more insightful decision-making across the enterprise.

Business Outcomes

- **Optimized performance:** Ensure your Tableau server is performing at its best, both in terms of infrastructure and user experience

- **Comprehensive roadmap:** Receive a report and roadmap, including specific recommendations and best practices for maximizing the benefits of your Tableau environment

- **Streamlined issue resolution:** Identify and address technical issues that will alleviate the burden of troubleshooting
