Google Cloud Platform Cloud-Native Enterprise Integration Solutions

Build a seamlessly connected enterprise with AWS-native integration solutions for greater agility, scalability, and security

Traditional iPaaS platforms have long helped enterprises connect applications, data, and systems. But as cloud strategies mature and costs rise, organizations are rethinking their integration approach–seeking more agile, cloud-native solutions.

Argano delivers modern integration architectures built on Google Cloud Platform that go beyond iPaaS–enabling real-time, event-driven connectivity that's easier to manage, faster to deploy, and optimized for scale. With GCP-native services like serverless functions, intelligent streaming, and automated workflows, we help reduce total cost of ownership, accelerate innovation, and provide the governance and control your business demands.

Our Approach

API-First Integration Strategy

Build and manage cloud-native microservices with API Gateway for centralized governance, versioning, and scalable lifecycle management.

Event-Driven and Serverless Integration

Leverage Cloud Functions, Workflows, and real-time streaming–using best-fit integration patterns such as event-driven, asynchronous, or batch processing–to enable lightweight, scalable integrations with built-in performance optimization.

Governance, Security, and Monitoring

Ensure cost efficiency, compliance, and observability with centralized monitoring and logging using Cloud Monitoring and Cloud Logging to trace and track API transactions.

Benefits:

- **Unified Enterprise Connectivity:** Seamless integration across all business applications including hybrid and legacy
- **Optimized Cost & Performance:** Cloud-native APIs for high-performance, event-driven architectures, eliminating expensive iPaaS solutions
- **Enhanced Security & Compliance:** Secure integrations with IAM, encryption and compliant services in the cloud

Deliverables:

- API strategy and architecture blueprint
- Serverless orchestration setup
- Event-driven and real-time data processing
- Cloud-native API development and deployments (up to 5 midsize integrations)
- Secure enterprise integration implementation
- Training and documentation
